RESTORING SIGHT
TRANSFORMING LIVES
MISSION STATEMENT

Surgical Eye Expeditions (SEE) International provides sustainable medical, surgical and educational services through volunteer ophthalmic surgeons with the objectives of restoring sight and preventing blindness to disadvantaged individuals worldwide.

DEAR FRIENDS,

One of the miracles of life is the ability to see; to see those we love, beautiful scenery, and a starry night. There are also the everyday things we may take for granted, for which we depend on our eyesight, like driving, going to the movies, taking a bike ride, or watching our children play. Thankfully, those in our country who are blind have many incredible resources and new technologies to ensure that their quality of life is very fulfilling. In the developing world however, blindness can even mean the difference between life and death.

Life expectancy of the blind in most developing countries is usually less than half of that of someone with eyesight. The difficulties are compounded by the fact that a blind person is unable to contribute to his or her family income. Not only does blindness mean a father is unable to work, or a mother cannot care properly for her children, collect water, or go to market, but that someone else must also care for him or her. The consequence is that, very probably, two incomes are lost. This creates an overwhelming economic strain on the family and the community. In many cases, the added responsibility falls on the children, who will then lose the ability to go to school and experience a carefree childhood. Restored vision brings back both the miracle of sight and a tremendous, positive impact on the quality of life for that individual, their family and their community. The sobering truth is that 80% of blindness in those countries is treatable.

Here is the fact that astonishes me every time I think of it; most of the sight restoring surgeries conducted by SEE International—for those who may have been blind for five, 10 or even 20 years—can be done in about 30 minutes. And, because of our selfless volunteer ophthalmologists and our stringent stewardship of every donor dollar, the cost to cure one individual of blindness is about $100 when factoring in all operational costs and overhead. Think of it, for just $100 any one of us can literally restore someone’s sight.

We at SEE International are proud and humbled to report that we ended 2012 with an astonishing number of patients served. Through the hard work of our fantastic staff and the generous contributions of many individuals, companies and foundations, SEE International supported 10,208 sight restoring surgeries around the world. In 2012, we reached even more treatable children, women and men than in 2011, and our volunteer teams visited new sites, including Chiquitania, Bolivia; Fond des Blancs, Haiti; Port Harcourt, Nigeria; and Ganta, Liberia.

And our work isn’t just limited to the developing world; right here in Santa Barbara County, through our Santa Barbara Vision Care Program, SEE International completed 22 sight restoring surgeries and other treatments, and helped provide eye care to 1,247 adults and children.

Because of the efficient and coordinated efforts of volunteer surgeons, medical professional partners overseas, volunteers and the dedicated team at our global headquarters. SEE International is a highly leveraged model of efficiency.

It is with a determined resolve, that we report to you the need for our work is not decreasing; according to a recent World Health Organization report, more than 161 million people worldwide suffer from a serious visual impairment. The good news is there is a simple and successful cure for many of them, and you can continue to be a big part of that.

So, on behalf of people throughout the world who we are so privileged to serve, thank you for your critical role in bringing back the miracle of sight for thousands through your continued support.

With gratitude,

RANDAL E. AVOLIO
President/CEO
SEE OPERATIONS
AFRICA, THE MIDDLE EAST, EASTERN EUROPE

With a combined total of 12.8 million blind individuals in these regions, and limited access to ophthalmologists, many curable blind do not have access to the care they need. Being blind significantly increases mortality rates in these regions, and an estimated two-thirds of the blind people in Africa are women.

In 2012, SEE International assisted affiliate ophthalmologists in completing 1,924 surgeries and 3,999 screenings in 10 countries in these regions.

FROM THE FIELD

SEPTEMBER 2012, NAMIBIA - We have just returned from an Eye Camp in Oshakati, Namibia. The camp was run under the auspices of SEE International. The vast majority of the supplies we used were provided from a large donation by Alcon. The doctors in the group included three Namibian ophthalmologists, headed by Dr. Helena Ndume, and two SEE surgeons, Dr. Reed Kindermann from the USA and Dr. Jeremy Joseph from the UK. Over the course of five days, the group undertook 307 operations, of which 305 were cataract extractions and intra-ocular lens implantations.

You might be interested to know a little bit about this surgical camp. Organized by Dr. Ndume, each phase of the surgical experience has a highly trained component of the overall team and these various parts of the team together comprise a virtual assembly line of cataract surgery. Orderlies move the patients in and out of the operating theater, trained personnel provide the anesthetic blocks, skilled surgical technicians assist the surgeons and operating room support staff sterilize instruments, provide biometry and procure the correct IOLs and supplies.
All cataract extractions are completed using the small incision, manual extraction technique (these remote surgical settings do not lend themselves to phacoemulsification). In the end, a large number of blind people can see again and the joy is palpable. We wish you and Alcon, who made so much of this possible, could share in this joyful experience.

The ongoing program of Eye Camps in Namibia, which commenced in 1999, has resulted in a vast number of people undergoing sight restoring surgery. In Oshakati alone, while we were there this past month, Dr. Ndume was commended for her team’s completion of more than 4,000 cataracts since the program began. The overall census throughout Namibia of completed cataract procedures with the support of SEE International and Alcon since 1999 is truly extraordinary.

- Reed Kindermann, MD, and Jeremy Joseph, MD
FROM THE FIELD

NOVEMBER 2012, FIJI - This morning we concluded our most successful program to date with the final six patients being delivered to the Suva boat. Our team, once again led ably by Dr. Jeff Rutgard and Senior Theatre Nurse Ineke Van Laar, has worked tirelessly for the past two weeks to help change many lives. The medical team this year was made up of four from the US, two from Australia and five from New Zealand.

A total of around 350 patients were presented, many of them arriving at the hospital with sacks of taro/pineapple/cassava, etc. Cataract surgery and Yag Laser treatments were performed on 229 patients. For the first time, we operated on five patients with congenital bilateral cataracts who were under 12 years old. Dr. Rutgard is very positive about their outcomes.

At the other end of the age range, we operated on a 90-year-old man with bilateral cataracts who had been blind for 12 years. His wish was to see his only grandson for the first time. That wish was granted the following day.

We sincerely appreciate your support in making this outreach possible.

- John Amos, Rotary Club of Taveuni Island

ASIA, OCEANIA, RUSSIA

Asia is the world’s largest and most populous continent, and also home to an estimated one-third of the world’s blind. It is also estimated that just over 30 percent of the curable blind in Asia have their sight restored.

SEE International assisted affiliate ophthalmologists in completing 3,204 surgeries and 4,957 screenings in 2012. Our volunteer expedition teams worked in 10 countries in these regions.

Did you know...
For every $1 you donate, SEE International delivers more than $30 in medical supplies and services.
LATIN AMERICA AND THE CARIBBEAN

Blindness in Latin America and the Caribbean is in large part due to cataracts, a condition that in most cases is easily fixed. Throughout this region, there are many who suffer needlessly with their curable blindness because they simply have no access to proper eye care. An estimated half or more of the cases of blindness in this region are curable.

In 2012, SEE International assisted affiliate ophthalmologists in completing 4,451 surgeries and 10,157 screenings in 12 countries in this region.

FROM THE FIELD

JULY 2012, PERU - We are working with the Peruvian Ministry of Health to provide free cataract surgery to those patients who are truly indigent and have advanced cataracts. These patients will be from the surrounding remote mountain villages in the Andes. The ophthalmic surgeon will be Michael Sable, MD, and Garden City Surgicenter has generously provided a certified ophthalmic surgical technician, Lorena Chinchilla, to assist Dr. Sable.

The cataract surgical mission is a five-day expedition through SEE International and A Promise to Peru, with enough resources to allow doctors to perform 50 surgeries. We are so appreciative of the support SEE International has provided. Not only in the supplies that it donated and the equipment lent to us, but with the support that it provided us to help make the mission run smoothly and efficiently.

It’s such a thrill when you take someone who can barely see, and the day after surgery they come back and they are reading the eye charts.

In 2012, SEE surgeons visited 33 countries. Three of these are highlighted below.

**HAITI**
SEE International sight-restoring surgeries in 2012 = 282
People blind from cataracts = 45,000
Gross National Income per capita = $760*

**VIETNAM**
SEE International sight-restoring surgeries in 2012 = 474
People blind from cataracts = 170,000
Gross National Income per capita = $1,400*

**HONDURAS**
SEE International sight-restoring surgeries in 2012 = 413
People blind from cataracts = 50,000
Gross National Income per capita = $2,070*

COUNTRIES VISITED IN 2012

AFRICA
Countries: Liberia, Ethiopia, Democratic Republic of Congo, Nigeria, Ghana, Zimbabwe, Namibia, Lesotho

SOUTH ASIA
Countries: India

SOUTH AMERICA
Countries: Bolivia, Peru, Ecuador

NORTH AMERICA
Countries: Mexico

EUROPE
Countries: Bulgaria, Georgia

MIDDLE EAST
Countries: Lebanon

THE PACIFIC
Countries: Cambodia, Vietnam, Philippines, Fiji, Papua New Guinea, Mongolia, Palau, Vanuatu, Samoa

CENTRAL AMERICA & THE CARIBBEAN
Countries: Honduras, Haiti, Belize, Panama, Guatemala, Dominican Republic, El Salvador, Jamaica

“When we were in Nigeria last week, we operated on a 24-year-old woman named Constance. Constance was born with a cataract in one eye that got progressively worse as she got older, to the point that it was completely white. This was particularly striking as her eye color was very dark. She could function fairly normally as the vision in her other eye was good. While she was on the table as we were getting ready to do her surgery, I asked her how her cataract affected her life. She said she had to drop out of school at an early age because the other children bullied her and called her ugly because of her cataract. When I promised to do my best to fix it, she said ‘I can’t wait until tomorrow. For the first time in my life I will be able to look in a mirror and see someone beautiful.’ Her surgery went well. That case alone was worth the trip.”

- JOHN MILLIN, MD
DIABETIC RETINOPATHY PROGRAM

2012 marked the second year of SEE International’s Diabetic Retinopathy Program. The program was created to address the increasing epidemic of loss of sight due to Diabetes Mellitus. The World Health Organization reports that currently 170 million people worldwide are affected by visual impairment due to Diabetes Mellitus and estimates that this number will more than double by 2030.

SEE is answering the call to address this global health issue by establishing specific clinics to perform panretinal photocoagulation (PRP) procedures with a diode laser to prevent further vision loss and blindness in patients with Diabetes.

Through this innovative program, we conducted two successful international expeditions, where we screened 105 patients and performed 21 vision loss and blindness prevention procedures.

SEE collaborated with corporate partners IRIDEX and Ellex to receive a loaned laser and an indirect ophthalmoscope to use in clinics.

THE DIABETIC RETINOPATHY PROGRAM CONDUCTED SUCCESSFUL EXPEDITIONS TO EL PROGRESO, HONDURAS AND HO CHI MINH CITY, VIETNAM.

ANNUAL TRAINING FOR MANUAL SMALL INCISION CATARACT SURGERY (MSICS)

Since 2006, SEE International has offered its SEE surgeons an opportunity to expand their skills in the manual methods of cataract removal by organizing and hosting the Manual Small Incision Cataract Surgery (MSICS) training course and wet lab at its headquarters in Santa Barbara, California.

The course is specifically designed for practicing ophthalmologists planning to use the technique on one of SEE International’s expeditions.

“It is wonderful to see these board certified eye surgeons taking the time to improve their skills, learning a procedure that can be used in areas where access to modern surgical technology is not available,” said John Crowder, MD, SEE International’s Medical Director and founding board member.

“As a result, surgeons will be able to restore sight to some of the poorest and remote areas of the world. I am impressed with their dedication. Since 2006, we have taught MSICS to over 120 surgeons who have successfully used it to treat tens of thousands.”

Through a joint sponsorship of SEE International and the American Academy of Ophthalmology, the training course provides participants with Continuing Medical Education (CME) credits in accordance with the Essential Areas and Policies of the Accreditation Council for CME.

Thank you to Allergan and the San Diego Eye Bank for their generous support. Thank you to this year’s faculty: John Crowder, M.D. (Santa Barbara), Faculty Director and SEE International Medical Director and Board Member; Janak Shah, MBBS, DO (Mumbai, India); Jeffrey Rutgard, M.D. (San Diego); and Elizabeth Link, RN (Santa Barbara).
THE SANTA BARBARA VISION CARE PROGRAM (SBVCP)

THE RIGHT TO SIGHT BEGINS AT HOME

In addition to working globally in developing countries, SEE International also has a program in Santa Barbara. Established in the late 1980s, the SBVCP offers local access for those who are at increased risk of suffering further eye impairment or even blindness.

The SBVCP provides comprehensive eye exams and glaucoma screenings, eyeglasses – courtesy of the Santa Barbara Eyeglass Factory - medications and eye surgery at no cost to the patient.

Our patient referrals come from collaborative partnerships with many local organizations including; social service agencies, schools, churches and county clinics.

FROM 1992-2012, MORE THAN 50,000 PATIENTS IN SANTA BARBARA COUNTY HAVE RECEIVED FREE EYE CARE AND 350 SIGHT RESTORING SURGERIES HAVE BEEN PERFORMED.

“Thank you for giving me the opportunity to be one of the million patients you care for.

I am grateful to you for all you have done for the community of Santa Barbara. I thank you for your kindness, generosity, patience, professionalism, expertise and compassion you give to many in need. My eyes have amazingly improved since the last time I visited you.

Thank you for making a difference in my eyesight. Thank you SEE international!”

- FORMER PATIENT

The SBVCP is made possible by local ophthalmologists and others who donate their time and services, including organizations who donate in-kind medications, facility suppliers and financial donors.

Through the Santa Barbara Vision Care Program, SEE International completed 22 sight restoring procedures and helped to provide eye care to 1,247 individuals in Santa Barbara County. 2012 marked the second year of providing Diabetic Retinopathy screenings for SBVCP patients.

SEE SURGICAL TEAMS
OUR SURGICAL TEAMS

SEE International’s work to end curable blindness is made possible by a key partnership with our international affiliate network. By harnessing and deploying more than 600 dedicated ophthalmologists from around the world, we have completed more than 400,000 sight-restoring surgeries among underserved men, women and children.

These surgical teams from 75 countries generously donate their time and energy, typically spending five long days in the operating room at SEE International clinics in areas where need is great.

In 2012, our collaboration with these skilled medical professionals allowed us to accomplish more than 10,000 sight-restoring surgeries.

Traveling surgical teams generously take time from their own practices, pay their own way to and from expedition sites and transport or escort the supplies needed for the clinic – this better insures that all equipment arrives safely and on time.

Host affiliates are located near the in-country clinic site and lend their local expertise and medical knowledge and skills to each expedition. They are responsible for performing pre-screenings and post-operative care, arranging for in-country housing and transportation for visiting teams and coordinating appropriate approvals from local health authorities.

Expeditions are supported not only by talented surgeons and registered nurses with ophthalmic experience, but also by certified ophthalmic technicians, surgical technicians and equipment technicians who donate their time and talents.

Everyone at SEE International is truly grateful for the many talented teams around the world who help carry our mission forward by volunteering their services so humanely.

To qualify, a lead SEE surgeon must be in active practice and board certified (or foreign equivalent) in their country of residence. A typical surgical clinic lasts for five days, Monday through Friday. Other activities may include lectures and roundtable discussions about the clinic.

To learn more about becoming a SEE International “SEE Doc”, or to complete an application form, please visit our website at www.seeinternational.org.
